Important safety instructions

WARNING: To reduce risk of fire or electric shock, do not expose this apparatus to rain or moisture.
Read one (or all) including Edifier's S350DB active speakers. Please read this manual carefully before operating this system.

CAUTION
RISK OF ELECTRIC SHOCK
DO NOT OPEN

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water and avoid any apparatus that faucet or shower splashes or drips.
6. Clean only with dry cloth. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
7. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
8. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
9. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
10. Only use attachments/accessories specified by the manufacturer.
11. Unplug this apparatus during lightning storms or when unused for long periods of time.
12. Refer all repairs to qualified service personnel. Repair is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
13. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
14. Do not overload wall outlets and extension cords as this can result in fire or electric shock.
15. Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.
16. Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.
17. Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
a. When the power cord or connector is damaged or frayed.
b. If liquid has been spilled into the product.
c. If the product has been exposed to rain or water.
d. If the product does not operate properly when the operating instructions are followed. Only adjust those controls that are covered by the operating instructions because improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
e. If the product has been dropped or the cabinet has been damaged.
f. If the product exhibits a distinct change in performance, indicating a need for service.
18. When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.
19. Upon completion of any service or repair to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.
20. The mains plug is used as a disconnect device and should remain readily operable.
21. Do not place any sources of naked flames, such as lighted candles, on the product.
22. The apparatus shall not be exposed to dripping or splashing and no objects filled with liquids, such as vases, should be placed on the apparatus.
23. Excessive sound pressure from earbuds and headphones can cause hearing loss.
24. Do not place the product in environments with poor ventilation.
25. Do not place the product in environments with high humidity.
26. Do not place the product in environments with high temperature.
27. Do not place the product in environments with high vibration.
28. Do not place the product in environments with high dust.
29. Do not place the product in environments with high electromagnetic radiation.
30. Do not place the product in environments with high salinity.
31. Do not place the product in environments with high alkalinity.
32. Do not place the product in environments with high acidity.
33. The product is designed to operate in a moderate climate environment.
34. Do not place the product in environments with high altitude.
35. The product is designed to operate at altitude of 2000 meters or less.
36. Do not place the product in environments with high pollution.
37. The product is designed to operate in environments with pollution level 2.
38. Do not place the product in environments with high ultraviolet radiation.
39. The product is designed to operate in environments with ultraviolet radiation level 1.
40. Do not place the product in environments with high pressure.
41. The product is designed to operate in environments with pressure 86kPa~106kPa.
42. Do not place the product in environments with high ozone.
43. The product is designed to operate in environments with ozone level 0.
44. Do not place the product in environments with high explosive gas.
45. The product is designed to operate in environments without explosive gas.
46. Do not place the product in environments with high explosive dust.
47. The product is designed to operate in environments without explosive dust.
48. Do not place the product in environments with high salt fog.
49. The product is designed to operate in environments without salt fog.
50. Do not place the product in environments with high mold.
51. The product is designed to operate in environments without mold.
52. Do not place the product in environments with high sand.
53. The product is designed to operate in environments without sand.
54. Do not place the product in environments with high vibration.
55. The product is designed to operate in environments with vibration level 1.
56. Do not place the product in environments with high impact.
57. The product is designed to operate in environments without impact.
58. Do not place the product in environments with high electromagnetic interference.
59. The product is designed to operate in environments without electromagnetic interference.
60. Do not place the product in environments with high electrostatic.
61. The product is designed to operate in environments without electrostatic.
62. Do not place the product in environments with high electromagnetic field.
63. The product is designed to operate in environments without electromagnetic field.
64. Do not place the product in environments with high electromagnetic radiation.
65. The product is designed to operate in environments without electromagnetic radiation.
66. Do not place the product in environments with high electromagnetic interference.
67. The product is designed to operate in environments without electromagnetic interference.
68. Do not place the product in environments with high electromagnetic susceptibility.
69. The product is designed to operate in environments without electromagnetic susceptibility.
70. Do not place the product in environments with high electromagnetic compatibility.
71. The product is designed to operate in environments without electromagnetic compatibility.
72. Do not place the product in environments with high electromagnetic pollution.
73. The product is designed to operate in environments without electromagnetic pollution.
74. Do not place the product in environments with high electromagnetic radiation.
75. The product is designed to operate in environments without electromagnetic radiation.
76. Do not place the product in environments with high electromagnetic interference.
77. The product is designed to operate in environments without electromagnetic interference.
78. Do not place the product in environments with high electromagnetic susceptibility.
79. The product is designed to operate in environments without electromagnetic susceptibility.
80. Do not place the product in environments with high electromagnetic compatibility.
81. The product is designed to operate in environments without electromagnetic compatibility.
82. Do not place the product in environments with high electromagnetic pollution.
83. The product is designed to operate in environments without electromagnetic pollution.
84. Do not place the product in environments with high electromagnetic radiation.
85. The product is designed to operate in environments without electromagnetic radiation.
86. Do not place the product in environments with high electromagnetic interference.
87. The product is designed to operate in environments without electromagnetic interference.
88. Do not place the product in environments with high electromagnetic susceptibility.
89. The product is designed to operate in environments without electromagnetic susceptibility.
90. Do not place the product in environments with high electromagnetic compatibility.
91. The product is designed to operate in environments without electromagnetic compatibility.
92. Do not place the product in environments with high electromagnetic pollution.
93. The product is designed to operate in environments without electromagnetic pollution.
94. Do not place the product in environments with high electromagnetic radiation.
95. The product is designed to operate in environments without electromagnetic radiation.
96. Do not place the product in environments with high electromagnetic interference.
97. The product is designed to operate in environments without electromagnetic interference.
98. Do not place the product in environments with high electromagnetic susceptibility.
99. The product is designed to operate in environments without electromagnetic susceptibility.
100. Do not place the product in environments with high electromagnetic compatibility.
101. The product is designed to operate in environments without electromagnetic compatibility.
102. Do not place the product in environments with high electromagnetic pollution.
103. The product is designed to operate in environments without electromagnetic pollution.
104. Do not place the product in environments with high electromagnetic radiation.
105. The product is designed to operate in environments without electromagnetic radiation.
106. Do not place the product in environments with high electromagnetic interference.
107. The product is designed to operate in environments without electromagnetic interference.
108. Do not place the product in environments with high electromagnetic susceptibility.
109. The product is designed to operate in environments without electromagnetic susceptibility.
110. Do not place the product in environments with high electromagnetic compatibility.
111. The product is designed to operate in environments without electromagnetic compatibility.
112. Do not place the product in environments with high electromagnetic pollution.
113. The product is designed to operate in environments without electromagnetic pollution.
114. Do not place the product in environments with high electromagnetic radiation.
115. The product is designed to operate in environments without electromagnetic radiation.
116. Do not place the product in environments with high electromagnetic interference.
117. The product is designed to operate in environments without electromagnetic interference.
118. Do not place the product in environments with high electromagnetic susceptibility.
119. The product is designed to operate in environments without electromagnetic susceptibility.
120. Do not place the product in environments with high electromagnetic compatibility.
121. The product is designed to operate in environments without electromagnetic compatibility.
122. Do not place the product in environments with high electromagnetic pollution.
123. The product is designed to operate in environments without electromagnetic pollution.
124. Do not place the product in environments with high electromagnetic radiation.
125. The product is designed to operate in environments without electromagnetic radiation.
126. Do not place the product in environments with high electromagnetic interference.
127. The product is designed to operate in environments without electromagnetic interference.
128. Do not place the product in environments with high electromagnetic susceptibility.
129. The product is designed to operate in environments without electromagnetic susceptibility.
130. Do not place the product in environments with high electromagnetic compatibility.
131. The product is designed to operate in environments without electromagnetic compatibility.
132. Do not place the product in environments with high electromagnetic pollution.
133. The product is designed to operate in environments without electromagnetic pollution.
134. Do not place the product in environments with high electromagnetic radiation.
135. The product is designed to operate in environments without electromagnetic radiation.
136. Do not place the product in environments with high electromagnetic interference.
137. The product is designed to operate in environments without electromagnetic interference.
138. Do not place the product in environments with high electromagnetic susceptibility.
139. The product is designed to operate in environments without electromagnetic susceptibility.
140. Do not place the product in environments with high electromagnetic compatibility.
141. The product is designed to operate in environments without electromagnetic compatibility.
142. Do not place the product in environments with high electromagnetic pollution.
143. The product is designed to operate in environments without electromagnetic pollution.
144. Do not place the product in environments with high electromagnetic radiation.
145. The product is designed to operate in environments without electromagnetic radiation.
146. Do not place the product in environments with high electromagnetic interference.
147. The product is designed to operate in environments without electromagnetic interference.
148. Do not place the product in environments with high electromagnetic susceptibility.
149. The product is designed to operate in environments without electromagnetic susceptibility.
150. Do not place the product in environments with high electromagnetic compatibility.
151. The product is designed to operate in environments without electromagnetic compatibility.
152. Do not place the product in environments with high electromagnetic pollution.
153. The product is designed to operate in environments without electromagnetic pollution.
154. Do not place the product in environments with high electromagnetic radiation.
155. The product is designed to operate in environments without electromagnetic radiation.
156. Do not place the product in environments with high electromagnetic interference.
157. The product is designed to operate in environments without electromagnetic interference.
158. Do not place the product in environments with high electromagnetic susceptibility.
159. The product is designed to operate in environments without electromagnetic susceptibility.
160. Do not place the product in environments with high electromagnetic compatibility.
161. The product is designed to operate in environments without electromagnetic compatibility.
162. Do not place the product in environments with high electromagnetic pollution.
163. The product is designed to operate in environments without electromagnetic pollution.
164. Do not place the product in environments with high electromagnetic radiation.
165. The product is designed to operate in environments without electromagnetic radiation.
166. Do not place the product in environments with high electromagnetic interference.
167. The product is designed to operate in environments without electromagnetic interference.
168. Do not place the product in environments with high electromagnetic susceptibility.
169. The product is designed to operate in environments without electromagnetic susceptibility.
170. Do not place the product in environments with high electromagnetic compatibility.
171. The product is designed to operate in environments without electromagnetic compatibility.
172. Do not place the product in environments with high electromagnetic pollution.
173. The product is designed to operate in environments without electromagnetic pollution.
174. Do not place the product in environments with high electromagnetic radiation.
175. The product is designed to operate in environments without electromagnetic radiation.
176. Do not place the product in environments with high electromagnetic interference.
177. The product is designed to operate in environments without electromagnetic interference.
178. Do not place the product in environments with high electromagnetic susceptibility.
179. The product is designed to operate in environments without electromagnetic susceptibility.
180. Do not place the product in environments with high electromagnetic compatibility.
181. The product is designed to operate in environments without electromagnetic compatibility.
182. Do not place the product in environments with high electromagnetic pollution.
183. The product is designed to operate in environments without electromagnetic pollution.
184. Do not place the product in environments with high electromagnetic radiation.
185. The product is designed to operate in environments without electromagnetic radiation.
186. Do not place the product in environments with high electromagnetic interference.
187. The product is designed to operate in environments without electromagnetic interference.
188. Do not place the product in environments with high electromagnetic susceptibility.
189. The product is designed to operate in environments without electromagnetic susceptibility.
190. Do not place the product in environments with high electromagnetic compatibility.
191. The product is designed to operate in environments without electromagnetic compatibility.
192. Do not place the product in environments with high electromagnetic pollution.
193. The product is designed to operate in environments without electromagnetic pollution.
194. Do not place the product in environments with high electromagnetic radiation.
195. The product is designed to operate in environments without electromagnetic radiation.
196. Do not place the product in environments with high electromagnetic interference.
197. The product is designed to operate in environments without electromagnetic interference.
198. Do not place the product in environments with high electromagnetic susceptibility.
199. The product is designed to operate in environments without electromagnetic susceptibility.
200. Do not place the product in environments with high electromagnetic compatibility.
201. The product is designed to operate in environments without electromagnetic compatibility.
202. Do not place the product in environments with high electromagnetic pollution.
203. The product is designed to operate in environments without electromagnetic pollution.
204. Do not place the product in environments with high electromagnetic radiation.
205. The product is designed to operate in environments without electromagnetic radiation.
206. Do not place the product in environments with high electromagnetic interference.
207. The product is designed to operate in environments without electromagnetic interference.
208. Do not place the product in environments with high electromagnetic susceptibility.
209. The product is designed to operate in environments without electromagnetic susceptibility.
210. Do not place the product in environments with high electromagnetic compatibility.
211. The product is designed to operate in environments without electromagnetic compatibility.
212. Do not place the product in environments with high electromagnetic pollution.
213. The product is designed to operate in environments without electromagnetic pollution.
214. Do not place the product in environments with high electromagnetic radiation.
215. The product is designed to operate in environments without electromagnetic radiation.
216. Do not place the product in environments with high electromagnetic interference.
217. The product is designed to operate in environments without electromagnetic interference.
218. Do not place the product in environments with high electromagnetic susceptibility.
219. The product is designed to operate in environments without electromagnetic susceptibility.
220. Do not place the product in environments with high electromagnetic compatibility.
221. The product is designed to operate in environments without electromagnetic compatibility.
222. Do not place the product in environments with high electromagnetic pollution.
223. The product is designed to operate in environments without electromagnetic pollution.
224. Do not place the product in environments with high electromagnetic radiation.
225. The product is designed to operate in environments without electromagnetic radiation.
226. Do not place the product in environments with high electromagnetic interference.
227. The product is designed to operate in environments without electromagnetic interference.
228. Do not place the product in environments with high electromagnetic susceptibility.
229. The product is designed to operate in environments without electromagnetic susceptibility.
230. Do not place the product in environments with high electromagnetic compatibility.
231. The product is designed to operate in environments without electromagnetic compatibility.
232. Do not place the product in environments with high electromagnetic pollution.
233. The product is designed to operate in environments without electromagnetic pollution.
234. Do not place the product in environments with high electromagnetic radiation.
235. The product is designed to operate in environments without electromagnetic radiation.
236. Do not place the product in environments with high electromagnetic interference.
237. The product is designed to operate in environments without electromagnetic interference.
238. Do not place the product in environments with high electromagnetic susceptibility.
239. The product is designed to operate in environments without electromagnetic susceptibility.
240. Do not place the product in environments with high electromagnetic compatibility.
241. The product is designed to operate in environments without electromagnetic compatibility.
242. Do not place the product in environments with high electromagnetic pollution.
243. The product is designed to operate in environments without electromagnetic pollution.
244. Do not place the product in environments with high electromagnetic radiation.
245. The product is designed to operate in environments without electromagnetic radiation.
246. Do not place the product in environments with high electromagnetic interference.
247. The product is designed to operate in environments without electromagnetic interference.
248. Do not place the product in environments with high electromagnetic susceptibility.
249. The product is designed to operate in environments without electromagnetic susceptibility.
250. Do not place the product in environments with high electromagnetic compatibility.
251. The product is designed to operate in environments without electromagnetic compatibility.
252. Do not place the product in environments with high electromagnetic pollution.
253. The product is designed to operate in environments without electromagnetic pollution.
254. Do not place the product in environments with high electromagnetic radiation.
255. The product is designed to operate in environments without electromagnetic radiation.
256. Do not place the product in environments with high electromagnetic interference.
257. The product is designed to operate in environments without electromagnetic interference.
258. Do not place the product in environments with high electromagnetic susceptibility.
259. The product is designed to operate in environments without electromagnetic susceptibility.
260. Do not place the product in environments with high electromagnetic compatibility.
261. The product is designed to operate in environments without electromagnetic compatibility.
262. Do not place the product in environments with high electromagnetic pollution.
263. The product is designed to operate in environments without electromagnetic pollution.
264. Do not place the product in environments with high electromagnetic radiation.
265. The product is designed to operate in environments without electromagnetic radiation.
266. Do not place the product in environments with high electromagnetic interference.
267. The product is designed to operate in environments without electromagnetic interference.
268. Do not place the product in environments with high electromagnetic susceptibility.
269. The product is designed to operate in environments without electromagnetic susceptibility.
270. Do not place the product in environments with high electromagnetic compatibility.
271. The product is designed to operate in environments without electromagnetic compatibility.
272. Do not place the product in environments with high electromagnetic pollution.
273. The product is designed to operate in environments without electromagnetic pollution.
274. Do not place the product in environments with high electromagnetic radiation.
275. The product is designed to operate in environments without electromagnetic radiation.
276. Do not place the product in environments with high electromagnetic interference.
277. The product is designed to operate in environments without electromagnetic interference.
278. Do not place the product in environments with high electromagnetic susceptibility.
279. The product is designed to operate in environments without electromagnetic susceptibility.
280. Do not place the product in environments with high electromagnetic compatibility.
281. The product is designed to operate in environments without electromagnetic compatibility.
282. Do not place the product in environments with high electromagnetic pollution.
283. The product is designed to operate in environments without electromagnetic pollution.
284. Do not place the product in environments with high electromagnetic radiation.
285. The product is designed to operate in environments without electromagnetic radiation.
286. Do not place the product in environments with high electromagnetic interference.
287. The product is designed to operate in environments without electromagnetic interference.
288. Do not place the product in environments with high electromagnetic susceptibility.
289. The product is designed to operate in environments without electromagnetic susceptibility.
290. Do not place the product in environments with high electromagnetic compatibility.
291. The product is designed to operate in environments without electromagnetic compatibility.
292. Do not place the product in environments with high electromagnetic pollution.
293. The product is designed to operate in environments without electromagnetic pollution.
294. Do not place the product in environments with high electromagnetic radiation.
295. The product is designed to operate in environments without electromagnetic radiation.
296. Do not place the product in environments with high electromagnetic interference.
297. The product is designed to operate in environments without electromagnetic interference.
298. Do not place the product in environments with high electromagnetic susceptibility.
299. The product is designed to operate in environments without electromagnetic susceptibility.
300. Do not place the product in environments with high electromagnetic compatibility.
301. The product is designed to operate in environments without electromagnetic compatibility.
302. Do not place the product in environments with high electromagnetic pollution.
303. The product is designed to operate in environments without electromagnetic pollution.
304. Do not place the product in environments with high electromagnetic radiation.
305. The product is designed to operate in environments without electromagnetic radiation.
306. Do not place the product in environments with high electromagnetic interference.
307. The product is designed to operate in environments without electromagnetic interference.
308. Do not place the product in environments with high electromagnetic susceptibility.
309. The product is designed to operate in environments without electromagnetic susceptibility.
310. Do not place the product in environments with high electromagnetic compatibility.
311. The product is designed to operate in environments without electromagnetic compatibility.
312. Do not place the product in environments with high electromagnetic pollution.
313. The product is designed to operate in environments without electromagnetic pollution.
314. Do not place the product in environments with high electromagnetic radiation.
315. The product is designed to operate in environments without electromagnetic radiation.
316. Do not place the product in environments with high electromagnetic interference.
317. The product is designed to operate in environments without electromagnetic interference.
318. Do not place the product in environments with high electromagnetic susceptibility.
319. The product is designed to operate in environments without electromagnetic susceptibility.
320. Do not place the product in environments with high electromagnetic compatibility.
321. The product is designed to operate in environments without electromagnetic compatibility.
322. Do not place the product in environments with high electromagnetic pollution.
323. The product is designed to operate in environments without electromagnetic pollution.
324. Do not place the product in environments with high electromagnetic radiation.
325. The product is designed to operate in environments without electromagnetic radiation.
326. Do not place the product in environments with high electromagnetic interference.
327. The product is designed to operate in environments without electromagnetic interference.
328. Do not place the product in environments with high electromagnetic susceptibility.
329. The product is designed to operate in environments without electromagnetic susceptibility.
330. Do not place the product in environments with high electromagnetic compatibility.
331. The product is designed to operate in environments without electromagnetic compatibility.
332. Do not place the product in environments with high electromagnetic pollution.
333. The product is designed to operate in environments without electromagnetic pollution.
334. Do not place the product in environments with high electromagnetic radiation.
335. The product is designed to operate in environments without electromagnetic radiation.
336. Do not place the product in environments with high electromagnetic interference.
337. The product is designed to operate in environments without electromagnetic interference.
338. Do not place the product in environments with high electromagnetic susceptibility.
339. The product is designed to operate in environments without electromagnetic susceptibility.
340. Do not place the product in environments with high electromagnetic compatibility.
341. The product is designed to operate in environments without electromagnetic compatibility.
342. Do not place the product in environments with high electromagnetic pollution.
343. The product is designed to operate in environments without electromagnetic pollution.
344. Do not place the product in environments with high electromagnetic radiation.
345. The product is designed to operate in environments without electromagnetic radiation.
346. Do not place the product in environments with high electromagnetic interference.
347. The product is designed to operate in environments without electromagnetic interference.
348. Do not place the product in environments with high electromagnetic susceptibility.
349. The product is designed to operate in environments without electromagnetic susceptibility.
350. Do not place the product in environments with high electromagnetic compatibility.
351. The product is designed to operate in environments without electromagnetic compatibility.
352. Do not place the product in environments with high electromagnetic pollution.
353. The product is designed to operate in environments without electromagnetic pollution.
354. Do not place the product in environments with high electromagnetic radiation.
355. The product is designed to operate in environments without electromagnetic radiation.
356. Do not place the product in environments with high electromagnetic interference.
357. The product is designed to operate in environments without electromagnetic interference.
358. Do not place the product in environments with high electromagnetic susceptibility.
359. The product is designed to operate in environments without electromagnetic susceptibility.
360. Do not place the product in environments with high electromagnetic compatibility.
361. The product is designed to operate in environments without electromagnetic compatibility.
362. Do not place the product in environments with high electromagnetic pollution.
363. The product is designed to operate in environments without electromagnetic pollution.
364. Do not place the product in environments with high electromagnetic radiation.
365. The product is designed to operate in environments without electromagnetic radiation.
366. Do not place the product in environments with high electromagnetic interference.
367. The product is designed to operate in environments without electromagnetic interference.
368. Do not place the product in environments with high electromagnetic susceptibility.
369. The product is designed to operate in environments without electromagnetic susceptibility.
370. Do not place the product in environments with high electromagnetic compatibility.
371. The product is designed to operate in environments without electromagnetic compatibility.
372. Do not place the product in environments with high electromagnetic pollution.
373. The product is designed to operate in environments without electromagnetic pollution.
374. Do not place the product in environments with high electromagnetic radiation.
375. The product is designed to operate in environments without electromagnetic radiation.
376. Do not place the product in environments with high electromagnetic interference.
377. The product is designed to operate in environments without electromagnetic interference.
378. Do not place the product in environments with high electromagnetic susceptibility.
379. The product is designed to operate in environments without electromagnetic susceptibility.
380. Do not place the product in environments with high electromagnetic compatibility.
381. The product is designed to operate in environments without electromagnetic compatibility.
382. Do not place the product in environments with high electromagnetic pollution.
383. The product is designed to operate in environments without electromagnetic pollution.
384. Do not place the product in environments with high electromagnetic radiation.
385. The product is designed to operate in environments without electromagnetic radiation.
386. Do not place the product in environments with high electromagnetic interference.
387. The product is designed to operate in environments without electromagnetic interference.
388. Do not place the product in environments with high electromagnetic susceptibility.
389. The product is designed to operate in environments without electromagnetic susceptibility.
390. Do not place the product in environments with high electromagnetic compatibility.
391. The product is designed to operate in environments without electromagnetic compatibility.
392. Do not place the product in environments with high electromagnetic pollution.
393. The product is designed to operate in environments without electromagnetic pollution.
394. Do not place the product in environments with high electromagnetic radiation.
395. The product is designed to operate in environments without electromagnetic radiation.
396. Do not place the product in environments with high electromagnetic interference.
397. The product is designed to operate in environments without electromagnetic interference.
398. Do not place the product in environments with high electromagnetic susceptibility.
399. The product is designed to operate in environments without electromagnetic susceptibility.
400. Do not place the product in environments with high electromagnetic compatibility.
401. The product is designed to operate in environments without electromagnetic compatibility.
402. Do not place the product in environments with high electromagnetic pollution.
403. The product is designed to operate in environments without electromagnetic pollution.
404. Do not place the product in environments with high electromagnetic radiation.
405. The product is designed to operate in environments without electromagnetic radiation.
406. Do not place the product in environments with high electromagnetic interference.
407. The product is designed to operate in environments without electromagnetic interference.
408. Do not place the product in environments with high electromagnetic susceptibility.
409. The product is designed to operate in environments without electromagnetic susceptibility.
410. Do not place the product in environments with high electromagnetic compatibility.
411. The product is designed to operate in environments without electromagnetic compatibility.
412. Do not place the product in environments with high electromagnetic pollution.
413. The product is designed to operate in environments without electromagnetic pollution.
414. Do not place the product in environments with high electromagnetic radiation.
415. The product is designed to operate in environments without electromagnetic radiation.
416. Do not place the product in environments with high electromagnetic interference.
417. The product is designed to operate in environments without electromagnetic interference.
418. Do not place the product in environments with high electromagnetic susceptibility.
419. The product is designed to operate in environments without electromagnetic susceptibility.
420. Do not place the product in environments with high electromagnetic compatibility.
421. The product is designed to operate in environments without electromagnetic compatibility.
422. Do not place the product in environments with high electromagnetic pollution.
423. The product is designed to operate in environments without electromagnetic pollution.
424. Do not place the product in environments with high electromagnetic radiation.
425. The product is designed to operate in environments without electromagnetic radiation.
426. Do not place the product in environments with high electromagnetic interference.
427. The product is designed to operate in environments without electromagnetic interference.
428. Do not place the product in environments with high electromagnetic susceptibility.
429. The product is designed to operate in environments without electromagnetic susceptibility.
430. Do not place the product in environments with high electromagnetic compatibility.
431. The product is designed to operate in environments without electromagnetic compatibility.
432. Do not place the product in environments with high electromagnetic pollution.
433. The product is designed to operate in environments without electromagnetic pollution.
434. Do not place the product in environments with high electromagnetic radiation.
435. The product is designed to operate in environments without electromagnetic radiation.
436. Do not place the product in environments with high electromagnetic interference.
437. The product is designed to operate in environments without electromagnetic interference.
438. Do not place the product in environments with high electromagnetic susceptibility.
439. The product is designed to operate in environments without electromagnetic susceptibility.
440. Do not place the product in environments with high electromagnetic compatibility.
441. The product is designed to operate in environments without electromagnetic compatibility.
442. Do not place the product in environments with high electromagnetic pollution.
443. The product is designed to operate in environments without electromagnetic pollution.
444. Do not place the product in environments with high electromagnetic radiation.
445. The product is designed to operate in environments without electromagnetic radiation.
446. Do not place the product in environments with high electromagnetic interference.
447. The product is designed to operate in environments without electromagnetic interference.
448. Do not place the product in environments with high electromagnetic susceptibility.
449. The product is designed to operate in environments without electromagnetic susceptibility.
450. Do not place the product in environments with high electromagnetic compatibility.
451. The product is designed to operate in environments without electromagnetic compatibility.
452. Do not place the product in environments with high electromagnetic pollution.
453. The product is designed to operate in environments without electromagnetic pollution.
454. Do not place the product in environments with high electromagnetic radiation.
455. The product is designed to operate in environments without electromagnetic radiation.
456. Do not place the product in environments with high electromagnetic interference.
457. The product is designed to operate in environments without electromagnetic interference.
458. Do not place the product in environments with high electromagnetic susceptibility.
459. The product is designed to operate in environments without electromagnetic susceptibility.
460. Do not place the product in environments with high electromagnetic compatibility.
461. The product is designed to operate in environments without electromagnetic compatibility.
462. Do not place the product in environments with high electromagnetic pollution.
463. The product is designed to operate in environments without electromagnetic pollution.
464. Do not place the product in environments with high electromagnetic radiation.
465. The product is designed to operate in environments without electromagnetic radiation.
466. Do not place the product in environments with high electromagnetic interference.
467. The product is designed to operate in environments without electromagnetic interference.
468. Do not place the product in environments with high electromagnetic susceptibility.
469. The product is designed to operate in environments without electromagnetic susceptibility.
470. Do not place the product in environments with high electromagnetic compatibility.
471. The product is designed to operate in environments without electromagnetic compatibility.
472. Do not place the product in environments with high electromagnetic pollution.
473. The product is designed to operate in environments without electromagnetic pollution.
474. Do not place the product in environments with high electromagnetic radiation.
475. The product is designed to operate in environments without electromagnetic radiation.
476. Do not place the product in environments with high electromagnetic interference.
477. The product is designed to operate in environments without electromagnetic interference.
478. Do not place the product in environments with high electromagnetic susceptibility.
479. The product is designed to operate in environments without electromagnetic susceptibility.
480. Do not place the product in environments with high electromagnetic compatibility.
481. The product is designed to operate in environments without electromagnetic compatibility.
482. Do not place the product in environments with high electromagnetic pollution.
483. The product is designed to operate in environments without electromagnetic pollution.
484. Do not place the product in environments with high electromagnetic radiation.
485. The product is designed to operate in environments without electromagnetic radiation.
486. Do not place the product in environments with high electromagnetic interference.
487. The product is designed to operate in environments without electromagnetic interference.
488. Do not place the product in environments with high electromagnetic susceptibility.
489. The product is designed to operate in environments without electromagnetic susceptibility.
490. Do not place the product in environments with high electromagnetic compatibility.
491. The product is designed to operate in environments without electromagnetic compatibility.
492. Do not place the product in environments with high electromagnetic pollution.
493. The product is designed to operate in environments without electromagnetic pollution.
494. Do not place the product in environments with high electromagnetic radiation.
495. The product is designed to operate in environments without electromagnetic radiation.
496. Do not place the product in environments with high electromagnetic interference.
497. The product is designed to operate in environments without electromagnetic interference.
498. Do not place the product in environments with high electromagnetic susceptibility.
499. The product is designed to operate in environments without electromagnetic susceptibility.
500. Do not place the product in environments with high electromagnetic compatibility.
501. The product is designed to operate in environments without electromagnetic compatibility.
502. Do not place the product in environments with high electromagnetic pollution.
503. The product is designed to operate in environments without electromagnetic pollution.
504. Do not place the product in environments with high electromagnetic radiation.
505. The product is designed to operate in environments without electromagnetic radiation.
506. Do not place the product in environments with high electromagnetic interference.
507. The product is designed to operate in environments without electromagnetic interference.
508. Do not place the product in environments with high electromagnetic susceptibility.
509. The product is designed to operate in environments without electromagnetic susceptibility.
510. Do not place the product in environments with high electromagnetic compatibility.
511. The product is designed to operate in environments without electromagnetic compatibility.
512. Do not place the product in environments with high electromagnetic pollution.
513. The product is designed to operate in environments without electromagnetic pollution.
514. Do not place the product in environments with high electromagnetic radiation.
515. The product is designed to operate in environments without electromagnetic radiation.
516. Do not place the product in environments with high electromagnetic interference.
517. The product is designed to operate in environments without electromagnetic interference.
518. Do not place the product in environments with high electromagnetic susceptibility.
519. The product is designed to operate in environments without electromagnetic susceptibility.
520. Do not place the product in environments with high electromagnetic compatibility.
521. The product is designed to operate in environments without electromagnetic compatibility.
522. Do not place the product in environments with high electromagnetic pollution.
523. The product is designed to operate in environments without electromagnetic pollution.
524. Do not place the product in environments with high electromagnetic radiation.
525. The product is designed to operate in environments without electromagnetic radiation.
526. Do not place the product in environments with high electromagnetic interference.
527. The product is designed to operate in environments without electromagnetic interference.
528. Do not place the product in environments with high electromagnetic susceptibility.
529. The product is designed to operate in environments without electromagnetic susceptibility.
530. Do not place the product in environments with high electromagnetic compatibility.
531. The product is designed to operate in environments without electromagnetic compatibility.
532. Do not place the product in environments with high electromagnetic pollution.
533. The product is designed to operate in environments without electromagnetic pollution.
534. Do not place the product in environments with high electromagnetic radiation.
535. The product is designed to operate in environments without electromagnetic radiation.
536. Do not place the product in environments with high electromagnetic interference.
537. The product is designed to operate in environments without electromagnetic interference.
538. Do not place the product in environments with high electromagnetic susceptibility.
539. The product is designed to operate in environments without electromagnetic susceptibility.
540. Do not place the product in environments with high electromagnetic compatibility.
541. The product is designed to operate in environments without electromagnetic compatibility.
542. Do not place the product in environments with high electromagnetic pollution.
543. The product is designed to operate in environments without electromagnetic pollution.
544. Do not place the product in environments with high electromagnetic radiation.
545. The product is designed to operate in environments without electromagnetic radiation.
546. Do not place the product in environments with high electromagnetic interference.
547. The product is designed to operate in environments without electromagnetic interference.
548. Do not place the product in environments with high electromagnetic susceptibility.
549. The product is designed to operate in environments without electromagnetic susceptibility.
550. Do not place the product in environments with high electromagnetic compatibility.
551. The product is designed to operate in environments without electromagnetic compatibility.
552. Do not place the product in environments with high electromagnetic pollution.
553. The product is designed to operate in environments without electromagnetic pollution.
554. Do not place the product in environments with high electromagnetic radiation.
555. The product is designed to operate in environments without electromagnetic radiation.
556. Do not place the product in environments with high electromagnetic interference.
557. The product is designed to operate in environments without electromagnetic interference.
558. Do not place the product in environments with high electromagnetic susceptibility.
559. The product is designed to operate in environments without electromagnetic susceptibility.
560. Do not place the product in environments with high electromagnetic compatibility.
561. The product is designed to operate in environments without electromagnetic compatibility.
562. Do not place the product in environments with high electromagnetic pollution.
563. The product is designed to operate in environments without electromagnetic pollution.
564. Do not place the product in environments with high electromagnetic radiation.
565. The product is designed to operate in environments without electromagnetic radiation.
566. Do not place the product in environments with high electromagnetic interference.
567. The product is designed to operate in environments without electromagnetic interference.
568. Do not place the product in environments with high electromagnetic susceptibility.
569. The product is designed to operate in environments without electromagnetic susceptibility.
570. Do not place the product in environments with high electromagnetic compatibility.
571. The product is designed to operate in environments without electromagnetic compatibility.
572. Do not place the product in environments with high electromagnetic pollution.
573. The product is designed to operate in environments without electromagnetic pollution.
574. Do not place the product in environments with high electromagnetic radiation.
575. The product is designed to operate in environments without electromagnetic radiation.
576. Do not place the product in environments with high electromagnetic interference.
577. The product is designed to operate in environments without electromagnetic interference.
578. Do not place the product in environments with high electromagnetic susceptibility.
579. The product is designed to operate in environments without electromagnetic susceptibility.
580. Do not place the product in environments with high electromagnetic compatibility.
581. The product is designed to operate in environments without electromagnetic compatibility.
582. Do not place the product in environments with high electromagnetic pollution.
583. The product is designed to operate in environments without electromagnetic pollution.
584. Do not place the product in environments with high electromagnetic radiation.
585. The product is designed to operate in environments without electromagnetic radiation.
586. Do not place the product in environments with high electromagnetic interference.
587. The product is designed to operate in environments without electromagnetic interference.
588. Do not place the product in environments with high electromagnetic susceptibility.
589. The product is designed to operate in environments without electromagnetic susceptibility.
590. Do not place the product in environments with high electromagnetic compatibility.
591. The product is designed to operate in environments without electromagnetic compatibility.
592. Do not place the product in environments with high electromagnetic pollution.
593. The product is designed to operate in environments without electromagnetic pollution.
